

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	03 October 2026
Team ID	SWTID-2026-5730
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in creative thinking that leads to problem solving. For the project Auto Ticket Classification using Flow Designer, the team explores different ways to reduce manual ticket classification, improve routing accuracy, and automate repetitive ServiceNow support activities. Ideas are first generated freely and are then grouped and prioritized based on their importance and feasibility.

Use this template to identify the ticket-management problem, generate possible automation ideas, group similar solutions, and prioritize the ideas that can be implemented effectively using ServiceNow Flow Designer.

Reference: ServiceNow Flow Designer concepts — triggers, conditions, actions and reusable flows.

Before you collaborate

Write down what you know about the current ticket process.

Team reflection

How are tickets classified today?

Set the goal

What should automation improve?

Prepare inputs

Which ticket fields can be used?

Define your problem statement

Focus the brainstorm on a clear ticket-classification problem.

Problem statement

Manual classification delays routing and creates inconsistency.

Key rules of brainstorming

- Stay on-topic
- Encourage automation ideas
- Defer judgement
- Listen to others
- Go for volume
- Keep ideas simple

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm helps to solve the problem.

Step-3: Idea Prioritization

Prioritize the ideas based on their Importance to the ticket-management problem and Feasibility within the ServiceNow environment. Ideas in the high-importance/high-feasibility area can be selected first for the proof of concept.
