1.	Data Rendered	Dataset: ServiceNow incident export (Tickets table) - 500 tickets, 11 columns, raised by students and teachers between 03-Aug-2026 and 30-Sep-2026. Each ticket carries only Caller Name and Short Description from the user; Category and Subcategory were assigned by the Flow Designer keyword rules. 2.	Data Preprocessing	Cleaning and shaping done in Power Query Editor: promoted headers, set data types, trimmed Short Description, removed duplicate ticket numbers, filtered out test tickets, replaced blank Category with "Other", and added Keyword Detected plus Date, Hour and Weekday columns. Column profiling shows 100% valid, 0% error, 0% empty for all key fields.																																																																																																																																																									
3.	Utilization of Data Filters	Slicers used: Category, Priority, Caller Type and Opened At (date range). Example shown: Category = Network and Hardware, Priority = High and Moderate, Date = September 2026, which returns 88 of 500 tickets. A page-level filter (Category <> blank) and a visual-level Top N filter on Subcategory are also applied.																																																																																																																																																									
4.	DAX Queries Used	Measures and calculated column created in the Tickets model: Total Tickets = COUNTROWS (Tickets) Auto Classified Tickets = CALCULATE ([Total Tickets], Tickets[Classification Source] = "Flow Designer") Auto Classification Rate % = DIVIDE ([Auto Classified Tickets], [Total Tickets])																																																																																																																																																									

Data quality profile (column quality / distribution)

Number	500 distinct	100% valid
Short Description	500 rows	100% valid
Category	5 distinct	100% valid
Subcategory	5 distinct	100% valid
Priority	4 distinct	100% valid
Opened At	DateTime	100% valid
Resolution Hours	Decimal	100% valid

M code (Advanced Editor, excerpt)

```
- Table.AddColumn(Tickets, "Keyword Detected", each  
if Text.Contains[Short Description, "wifi", Compare.Ordinal(Text.Case then "wifi")  
else if Text.Contains[Short Description, "projector", Compare.Ordinal(Text.Case then "projector")  
else if Text.Contains[Short Description, "password"] or Text.Contains[Short Description, "login"] then "Password/Login"  
else if Text.Contains[Short Description, "slow"] or Text.Contains[Short Description, "hangup"] then "Slow/Hangup"  
else "None")
```

APPLIED STEPS

- x Source (ServiceNow CSV export)
- x Promoted Headers
- x Changed type
- x Trimmed Short Description
- x Lowercased Keyword Column
- x Removed Duplicates (Number)
- x Replaced Nulls (Category = Other)
- x Added Keyword Detected
- x Added Date / Hour / Weekday
- x Filtered test Tickets
- x Renamed Columns

Dashboard design

No of Visualizations / Graphs - 10

5 KPI cards (Total Tickets, Auto-Classified, Auto-Classification Rate, Avg Resolution Hours, Open Tickets), donut chart (tickets by Category), bar chart (tickets by Subcategory), column chart (tickets by Priority), line chart (weekly trend by Category) and column chart (ticket status). In total the dashboard page holds 10 visuals (5 cards + 5 charts).
