

Project Development Phase

Performance Test

Date	02 October 2026
Team ID	SWTID-2026-5730
Project Name	AUTO-TICKET CLASSIFICATION USING FLOW DESIGNER
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values															
1.	Data Rendered	Ticket data represented using Caller Name and Short Description, with Category and Subcategory classification. Data Rendered Illustrative Ticket Data view for the updated auto-ticket classification project <table><tr><th>Caller</th><th>Short Description</th><th>Classification</th></tr><tr><td>Student A</td><td>WiFi not connecting</td><td>Network → WiFi</td></tr><tr><td>Teacher B</td><td>Projector not working</td><td>Hardware → Projector</td></tr><tr><td>Student C</td><td>Forgot password</td><td>Access → Forgot Password</td></tr><tr><td>Teacher D</td><td>Computer is slow</td><td>Performance → Slow Computer</td></tr></table>	Caller	Short Description	Classification	Student A	WiFi not connecting	Network → WiFi	Teacher B	Projector not working	Hardware → Projector	Student C	Forgot password	Access → Forgot Password	Teacher D	Computer is slow	Performance → Slow Computer
Caller	Short Description	Classification															
Student A	WiFi not connecting	Network → WiFi															
Teacher B	Projector not working	Hardware → Projector															
Student C	Forgot password	Access → Forgot Password															
Teacher D	Computer is slow	Performance → Slow Computer															
2.	Data Preprocessing	Illustrative preparation: normalize ticket text, check missing descriptions, and map predefined keywords to Category/Subcategory. Data Preprocessing Illustrative preparation steps before visualization 1. Input Caller Name Short Description 2. Clean Normalize keyword text Check missing descriptions 3. Map WiFi → Network/WiFi Projector → Hardware/Projector Password/Login → Access/Forgot Password Slow/Hanging → Performance/Slow Computer															
3.	Utilization of Filters	Category and Subcategory filters are shown for reviewing the four project classification groups. Utilization of Filters Illustrative Filter controls aligned with project categories Category Network Hardware Access Performance Subcategory WiFi Projector/Forgot Password Slow Computer Keyword View WiFi Projector Password / Login Slow / Hanging															

Model Performance Testing (continued)

S.No.	Parameter	Screenshot / Values
4.	Calculation fields Used	Illustrative fields for reporting include Ticket Count and Category/Subcategory classification views. No specific Tableau calculated-field formula is provided in the source project document. Calculation Fields Used Ticket Count COUNT of rendered ticket records Classification Category + Subcategory mapping Automation View Compare ticket classifications by category/subcategory
5.	Dashboard design	Illustrative dashboard layout for ticket classification reporting. No. of Visualizations / Graphs - 3 (illustrative). Dashboard Design KPI Total Tickets Classified Tickets Chart Tickets by Category Network Hardware Access Performance Detail Subcategory distribution Filter controls
6	Story Design	Illustrative story sequence linking ticket input, automated classification, dashboard summary, and insight review. No. of Visualizations / Graphs - 4 (illustrative). Story Design 1. Input Ticket description enters the process → 2. Classification Flow Designer keywords rules assign category → 3. Dashboard Tableau view summarizes classified tickets → 4. Insight Category and subcategory patterns are reviewed
